BAD ELECTROSTATIC EXTRACTION BENCHES

BAD ELECTROSTATIC EXTRACTION BENCHES

Electrostatic extraction benches equipped with electric fans.

They are suitable for the extraction of fumes during the course of various welding processes of metals and the thermal welding of plastic materials.

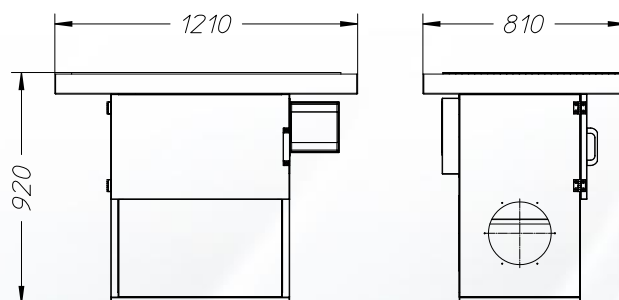

The filter system consists of metallic mechanical filters and two-stage electrostatic cells that do not therefore require spare parts.

They come with an extraction grate on which to place the pieces being worked on.

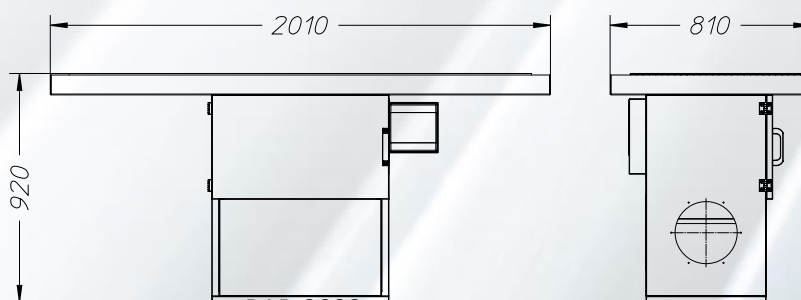

They can be equipped with non-extracting protective bulkheads with or without protective glass or extraction bulkheads with anti-rebound fragment protection slats.
